PARTICIPANT INFORMATION SHEET

TeacherAID project. The human and academic cost of AI in European education (Phase 0, pilot study)

Principal investigator: Dr. Cristina Prego de Oliver López · Universidad Rey Juan Carlos (URJC), Madrid, Spain · ORCID: 0000-0001-7997-7700 · Contact email: cristina.prego@urjc.es

1. Invitation and purpose of the study

You are invited to take part in the TeacherAID study, a research project carried out by Universidad Rey Juan Carlos (URJC) that explores how artificial intelligence (AI) affects the professional wellbeing of teachers across the European Union. The study examines self-perceived knowledge, training received, self-efficacy and institutional context in relation to AI, with the aim of generating an initial evidence base to inform future recommendations on teacher training and responsible AI governance in education.

2. Who can take part?

Anyone can take part who is aged 18 or over, works as a practising teacher at an educational institution of any stage (from early childhood education to higher education) and works in a European Union country. People who are not currently working as teachers, who work outside the European Union, or who are under 18 cannot take part. Before starting, you will be asked to confirm explicitly that you meet these requirements; without this confirmation the questionnaire cannot be accessed.

3. What does taking part involve?

Taking part means answering an online questionnaire of about 10 minutes, available in eight languages (Spanish, English, French, German, Italian, Portuguese, Polish and Dutch), at https://drcp-77.github.io/TeacherAID/. The questionnaire has three blocks: the first, the main block, on your profile and your relationship with AI; the second, optional, on the institutional context of your school; and the third, optional, on the use of AI in academic work, only if you carry out research. You can finish at the end of any block.

4. Voluntary participation

Your participation is completely voluntary. You can stop answering and leave the questionnaire at any time, without giving a reason and without any consequence. No content question is compulsory: every question, not only the situations in the first block, includes the option "I would not know how to answer this", which you can select instead of answering. The only compulsory step is the initial confirmation of participation.

5. Anonymity and data protection

This study does not process personal data. The questionnaire does not collect your name, email address, school, IP address, device identifier, geolocation or any other data that could identify you

directly or indirectly. The data are anonymous from the outset. Profile variables are collected in broad categories: country of work, age range, gender, type of employment contract, highest level of education, educational stage, years of teaching experience, frequency of AI use in teaching and type of school (urban, semi-urban or rural). Results will not be reported separately for countries with fewer than 50 responses; these will be grouped as "other EU countries".

To ensure that no one can be identified by combining these variables, only aggregated results will be published, never individual responses, and no published result will report data for groups of fewer than 10 responses; in that case, categories will be merged or the figure will be withheld. Only the principal investigator has access to individual responses.

Neither the questionnaire nor the project's information website uses cookies, tracking pixels or analytics tools, and the questionnaire does not collect participants' IP addresses.

6. Storage, custody and providers

The questionnaire is hosted on a purpose-built website (https://drcp-77.github.io/TeacherAID/). Anonymous answers are received in a spreadsheet accessible only to the principal investigator, used only during data collection. When data collection closes, on 31 May 2027, they are moved to the institutional OneDrive space of Universidad Rey Juan Carlos, where they are kept, and the collection spreadsheet is deleted. The project information website is https://teacheraid.eu. An encrypted backup copy, accessible only to the principal investigator, is also kept.

Technical providers: the questionnaire is hosted on GitHub Pages (GitHub, Inc.), the anonymous responses are received temporarily in Google Sheets (Google) during data collection, and the information website is hosted by Hostnirvana. Like any web server, these providers may log technical connection data, which the principal investigator neither accesses nor uses.

7. Data retention and deletion period

The anonymous data will be kept in the institutional OneDrive space of URJC until 31 December 2031 and permanently deleted on that date. The backup copy is deleted on the same date.

8. Risks and benefits

The study involves no physical risk. The risk is minimal and only psychological or emotional: some questions, particularly the vignettes in the first block, describe situations of AI implementation that could cause professional concern (for example, automated evaluation of teacher performance). These situations are presented as hypothetical, based on real cases documented in several countries, and not as predictions about your own school. You can skip any question or leave the questionnaire at any time.

There is no direct benefit or financial compensation for taking part. The benefits are collective in nature: generating scientific evidence on the impact of AI on the wellbeing of European teachers, which may inform future teacher training policies and responsible AI governance in education.

9. Dissemination of results

Results will be presented in aggregated and anonymous form in scientific articles and conferences. Under no circumstances will information that could identify a specific participant be published. At the end of the questionnaire, you may view a personalised summary of your own responses, for purely reflective purposes; this summary is not stored and does not generate a persistent profile associated with you.

10. Contact

For any questions or queries about the study, please contact the principal investigator, Dr. Cristina Prego de Oliver López, at cristina.prego@urjc.es.
